

# Which COVID-19 mRNA vaccine should I get?

The mRNA vaccines (Pfizer-BioNTech Comirnaty and Moderna Spikevax) are interchangeable. Either option is safe and effective against COVID-19 and variants of concern.

Get the vaccine that is available for your age group.

Both vaccines protect against severe illness, hospitalization, and ICU admissions, especially when boosted.

The COVID-19 vaccine, combined with all other layers of protection, is our best defense against COVID-19 infection.
